Problématique : *whether a university degree is still worthwhile in the UK now that it leaves most graduates heavily in debt* (coût croissant et dette d'un côté, valeur personnelle et sociale de l'autre).

Durée : 3 h, sans machine ni dictionnaire ; épreuve commune aux six filières, mutualisée avec e3a-Polytech. Synthèse en anglais de quatre documents d'égale importance, en 400 mots ± 10 % (360 à 440), titre obligatoire et compris dans le total ; source et date seules dans la présentation du corpus, renvoi par « Doc.1 », « Doc.2 »… ; nombre total de mots indiqué et trait vertical tous les vingt mots. Décompte : suites de caractères séparées par des espaces (un nombre, un pourcentage, « Doc.1 », un mot à trait d'union comptent chacun pour un mot) ; les traits verticaux ne comptent pas.

Synthèse

The Cost and Value of University Education in the UK

The four documents, from thetimes.com (Doc.1, August 2023), the Higher | Education Policy Institute (Doc.2, February 2025), theguardian.com (Doc.3, August 2024) and the Policy Institute at King's College London (Doc.4, May | 2024), deal with higher education in the UK. They raise the question of whether a degree is still worthwhile now | that it leaves most graduates heavily in debt.

Going to university has first become a financial decision. Since 1998, tuition | fees have risen from £1,000 to £9,000, so students are likely to graduate with over £60,000 of debt (Doc.1), sometimes | up to £120,000 once interest has been added (Doc.3). As the maintenance loan no longer covers the cost of living, | many students also work about 14.5 hours a week (Doc.2). Yet the return on this investment is uncertain : five years | after graduating, the typical graduate earns only slightly more than the average young worker, while women and students from poorer | backgrounds earn even less (Doc.1).

Repayment is also lasting longer, since debts will now be written off after 40 years | instead of 30, and between 52% (Doc.1) and 65% (Doc.2) of graduates are expected to repay their loans in full. | This burden shapes graduates' lives : some turn down promotions or settle for part-time jobs to avoid higher repayments, while the | debt makes buying a home harder and weigh on their mental health and family plans (Doc.3). Graduates in lower-paid fields | feel "trapped" and "misled", and most admit they never fully understood the terms of their loans (Doc.3). Doc.1 even fears | that university may become reserved for the wealthy, although record numbers of disadvantaged students are still enrolling (Doc.2).

Nevertheless, graduates | still value what university brings beyond money. It fosters independence, resilience and people skills, exposes students to people from diverse | backgrounds and opens doors to work placements (Doc.2). Accordingly, 81% of graduates consider their degree worth it overall, and 84% | value the knowledge gained, whereas only 66% say so about their career prospects (Doc.4). Above all, only 8% would choose | not to go to university again, and 39% would choose a different degree (Doc.4) : regret concerns the choice of course | rather than higher education itself, even if one doctor now advises her younger relatives to skip it (Doc.3).

Overall, a | university education in the UK remains a valued experience, but its financial benefit increasingly depends on gender, social background and | career path.
